NAME

      curl_free - reclaim memory that has been obtained through a libcurl call

SYNOPSIS

      #include <curl/curl.h>

      void *curl_free(char * *ptr* **);**

DESCRIPTION

      curl_free reclaims memory that has been obtained through a libcurl call. Use curl_free() instead of free() to avoid anomalies that can result from differences in memory management between your application and libcurl.

SEE ALSO
